Predicting Coronary Heart Disease Key

CDC Data: Interactive Atlas of Heart Disease and Stroke

Overview of Data Sources Used by CDC

Variable Information

cnty_fips

- This variable lists the unique 5-digit codes that represents specific US counties
- Data was collected from 3,226 counties (including DC)

display_names

- This variable lists the name of each county that data was collected from
- Data was collected from 3,226 counties (including DC)

State

- This Variable lists the states where data was collected
- States may be listed multiple times
    - This is because the *State* variable goes with the *display_names* variable
    - The *State* variable indicates what state the county is a part of
- *Note:* We only analyzed data for the continental US states and that is what is reported in our dataset
    - The CDC's complete data set incorporated all 50 US states and territories

heart_disease

- *heart_disease* is a measure that captures the percentage of coronary heart disease experienced at the county level
    - *Note:* The CDC also reports the crude prevalence percentage of coronary heart disease
- Data Source: PLACES: Local Data for Better Health (Model-based population-level estimates from CDC Behavioral Risk Factor Surveillance System)
    - PLACES collected data for coronary heart disease among adults aged 18+
    - The CDC used the PLACES data collected in 2020
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Prevalence (county, census tract)*

high_cholesterol

- *high_cholesterol* is a measure that captures the percentage of high cholesterol experienced at the county level
    - *Note:* The CDC also reports the crude prevalence percentage of high cholesterol
- Data Source: PLACES: Local Data for Better Health (Model-based population-level estimates from CDC Behavioral Risk Factor Surveillance System)
    - PLACES collected data for high cholesterol among adults aged 18+
    - *Note:* This variable specifically measures high cholesterol among adults screened in past 5 Years, percentage
    - The CDC used the PLACES data collected in 2019
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

diagnosed_diabetes

- *diagnosed_diabetes* is a measure that captures the percentage of individuals diagnosed with diabetes at the county level
- Data Source: Division of Diabetes Translation
    - Division of Diabetes for diagnosed diabetes for adults age 20+
    - *Note:* This variable specifically measures diagnosed diabetes among adults screened in 2019, age-adjusted percentage
    - The CDC used the Division of Diabetes Translation data collected in 2019
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

obesity

- *obesity* is a measure that captures the percentage of obesity experienced at the county level
- Data Source: Division of Diabetes Translation
    - Division of Diabetes for diagnosed diabetes for adults age 20+
    - *Note:* This variable specifically measures obesity among adults screened in 2019, age-adjusted percentage
    - The CDC used the Division of Diabetes Translation data collected in 2019
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

physical_activity

- *physical_inactivity* is a measure that captures the physical_inactivity experienced at the county level
- Data Source: Division of Diabetes Translation
    - Division of Diabetes for diagnosed diabetes for adults age 20+
    - *Note:* This variable specifically measures leisure-time physical inactivity among adults screened in 2019, age-adjusted percentage
    - The CDC used the Division of Diabetes Translation data collected in 2019
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

current_smoker

- *current_smoker* is a measure that captures the percentage of individuals who smoke at the county level
- Data Source: PLACES: Local Data for Better Health (Model-based population-level estimates from CDC Behavioral Risk Factor Surveillance System)
    - PLACES collected data for current smoker status among adults aged 18+
    - The CDC used the PLACES data collected in 2020
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

broadband_internet

- *broadband_internet* is a measure that captures the percentage of households without a broadband internet subscription at the county level
- Data Source: Variety of national public data sources (e.g. U.S. Census Bureau)
    - Collected data for 2016-2020 (5 year)
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

computer

- *computer* is a measure that captures the percentage of households without a computer at the county level
- Data Source: Variety of national public data sources (e.g. U.S. Census Bureau)
    - Collected data for 2016-2020 (5 year)
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

education_lessthan_highschool

- *Education_lessthan_highschool* is a measure that captures the percentage of individuals without a high school diploma, ages 25+, at the county level
- Data Source: Variety of national public data sources (e.g. U.S. Census Bureau)
    - Collected data for 2016-2020 (5 year)
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

education_lessthan_college

- *Education_lessthan_college* is a measure that captures the percentage of individuals without 4+ years college, ages 25+, at the county level
- Data Source: Variety of national public data sources (e.g. U.S. Census Bureau)
    - Collected data for 2016-2020 (5 year)
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

foodstamp_snap

- *foodstamp_snap* is a measure that captures the percentage of foodstamp/supplemental nutrition assistance program recipients at the county level
- Data Source: Variety of national public data sources (e.g. U.S. Census Bureau)
    - Collected data for 2019
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

median_home_value

- *median_home_value* is a measure that captures the median home value at the county level
- Data Source: Variety of national public data sources (e.g. U.S. Census Bureau)
    - Collected data for 2016-2020 (5 year)
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

median_household_income

- *median_household_income* is a measure that captures the median household income at the county level
- Data Source: Variety of national public data sources (e.g. U.S. Census Bureau)
    - Collected data for 2020
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

income_inequality

- *income_inequality* is a measure that captures the income_inequality (Gini index) at the county level
- Data Source: Variety of national public data sources (e.g. U.S. Census Bureau)
    - Collected data for 2016-2020 (5 year)
    - Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

poverty

- *poverty* is a measure that captures percentage of individuals living in poverty, all ages, at the county level
- Data Source: Variety of national public data sources (e.g. U.S. Census Bureau)
    - Collected data for 2020
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

severe_housing_cost_burden

- *severe_housing_cost_burden* is a measure that captures percentage of households that spend 50% or more of their household income on housing at the county level
- Data Source: Variety of national public data sources (e.g. U.S. Census Bureau)
    - Collected data for 2016-2020 (5 year)
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

unemployment _rate

- *unemployment_rate* is a measure that captures unemployment rate, ages 16+, at the county level
- Data Source: Variety of national public data sources (e.g. U.S. Census Bureau)
    - Collected data for 2021
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

air_quality

- *air_quality* is a measure that captures the annual average ambient concentrations of PM2.5 at the county level
- Data Source: Variety of national public data sources

    - Collected data for 2016
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

park_access

- *park_access* is a measure that captures the percentage of population living within half a mile of a park at the county level
- Data Source: Variety of national public data sources
    - Collected data for 2015
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

urban_rural_value

- *urban_rural_value* is a measure that captures the urban_rural status of a county
- Data Source: Variety of national public data sources
    - Collected data for 2013
    - *Note: Scores and their meaning: Nonmetro-4, Medium-small metro-3, Large-fringe metro-2, Large central-metro-1, Not Classified- (-1)*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

population_all_genders18+

- *population_all_genders18+* is a measure that captures the population count of all genders ages 18+ at the county level
- Data Source: Variety of national public data sources
    - Collected data for 2016-2020 (5 year)
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

population_women18+

- *population_women18+* is a measure that captures the population count of women ages 18+ at the county level
- Data Source: Variety of national public data sources
    - Collected data for 2016-2020 (5 year)
    - *Note: This is a population estimate from the census tract by county*

- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

population_men18+

- *population_men18+* is a measure that captures the population count of men ages 18+ at the county level
- Data Source: Variety of national public data sources
    - Collected data for 2016-2020 (5 year)
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

population_all_ages

- *population_all_ages* is a measure that captures the total population count of all genders and all ages at the county level
- Data Source: Variety of national public data sources
    - Collected data for 2016-2020 (5 year)
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

population_over65_percent

- *population_over65_percent* is a measure that captures the percentage of population ages of 65 and over at the county level
- Data Source: Variety of national public data sources
    - Collected data for 2016-2020 (5 year)
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

american_indian_alaska_native_all_ages_nh_percent

- *american_indian_alaska_native_all_ages_nh_percent* is a measure that captures the percentage of American Indian/Alaska Native, non-Hispanic population of all ages at county level
- Data Source: Variety of national public data sources
    - Collected data for 2016-2020 (5 year)
    - *Note: This is a population estimate from the census tract by county*

- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

asian_pacific_islander_all_ages_nh_percent

- *asian_pacific_islander_all_ages_nh_percent* is a measure that captures the percentage of Asian or Native Hawaiian or Other Pacific Islander, non-Hispanic population of all ages at county level
- Data Source: Variety of national public data sources
    - Collected data for 2016-2020 (5 year)
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

black_all_ages_nh_percent

- *black_all_ages_nh_percent* is a measure that captures the percentage of Black or African-American, non-Hispanic population of all ages at county level
- Data Source: Variety of national public data sources
    - Collected data for 2016-2020 (5 year)
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

white_all_ages_nh_percent

- *white_all_ages_nh_percent* is a measure that captures the percentage of White, non-Hispanic population of all ages at county level
- Data Source: Variety of national public data sources
    - Collected data for 2016-2020 (5 year)
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

some_other_race_all_ages_nh_percent

- *some_other_race_all_ages_nh_percent* is a measure that captures the percentage of some other race, non-Hispanic population of all ages at county level
- Data Source: Variety of national public data sources
    - Collected data for 2016-2020 (5 year)
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

Two_ormore_races_all_ages_nh_percent

- *two_ormore_races_all_ages_nh_percent* is a measure that captures the percentage of some other race, non-Hispanic population of all ages at county level
- Data Source: Variety of national public data sources
    - Collected data for 2016-2020 (5 year)
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

hispanic_all_ages_percent

- *hispanic_all_ages_percent* is a measure that captures the percentage of Hispanic/Latino population of all ages at county level
- Data Source: Variety of national public data sources
    - Collected data for 2016-2020 (5 year)
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

cholesterol_medication_nonadherance_all_race

- *cholesterol_medication_nonadherance_all_race* is a measure that captures the cholesterol-lowering medication nonadherence percentage, all races/ethnicities, medicare Part D beneficiaries ages 65+
- Data Source: Variety of national public data sources
    - Collected data for 2019
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

cholesterol_nonadherance_Black_percent

- *cholesterol_nonadherance_Black_percent* is a measure that captures the cholesterol-lowering medication nonadherence percentage, Black (non-hispanic), medicare Part D beneficiaries ages 65+
- Data Source: Variety of national public data sources
    - Collected data for 2019
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

cholesterol_nonadherance_White_percent

- *cholesterol_nonadherance_White_percent* is a measure that captures the cholesterol-lowering medication nonadherence percentage, White (non-hispanic), medicare Part D beneficiaries ages 65+
- Data Source: Variety of national public data sources
    - Collected data for 2019
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

cholesterol_nonadherance_Hispanic_percent

- *cholesterol_nonadherance_Hispanic_percent* is a measure that captures the cholesterol-lowering medication nonadherence percentage, Hispanic, medicare Part D beneficiaries ages 65+
- Data Source: Variety of national public data sources
    - Collected data for 2019
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

cholesterol_nonadherance_NA/AI_percent

- *cholesterol_nonadherance_NA/AI_percent* is a measure that captures the cholesterol-lowering medication nonadherence percentage, American Indian and Alaskan Native, medicare Part D beneficiaries ages 65+
- Data Source: Variety of national public data sources
    - Collected data for 2019
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

cholesterol_nonadherence_AAPI_percent

- *cholesterol_nonadherance_AAPI_percent* is a measure that captures the cholesterol-lowering medication nonadherence percentage, ,Asian and Pacific Islander medicare Part D beneficiaries ages 65+
- Data Source: Variety of national public data sources
    - Collected data for 2019
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

cholesterol_screening_percent

- *cholesterol_screening_percent* is a measure that captures cholesterol screening among adults Ages 18+, crude prevalence percentage
- Data Source: Variety of national public data sources
    - Collected data for 2019
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

cardiac_rehab_eligibility_rate

- *cardiac_rehab_eligibility_rate* is a measure that captures the cardiac rehabilitation eligibility rate per 1,000 medicare fee-for-service beneficiaries
- Data Source: Variety of national public data sources
    - Collected data for 2018-2019
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

cardiac_rehab_participation_rate_percent

- *cardiac_rehab_participation_rate_percent* is a measure that captures the cardiac rehabilitation participation rate among all eligible fee-for-service medicare beneficiaries
- Data Source: Variety of national public data sources
    - Collected data for 2018-2019
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

cardiac_rehab_completion_rate_percent

- *cardiac_rehab_completion_rate_percent* is a measure that captures the cardiac rehabilitation completion rate among all initiating fee-for-service medicare beneficiaries
- Data Source: Variety of national public data sources
    - Collected data for 2018-2019
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

cardiac_rehab_mean_number_session

- *cardiac_rehab_mean_number_session* is a measure that captures the mean number of cardiac rehabilitation sessions used among initiating fee-for-service medicare beneficiaries
- Data Source: Variety of national public data sources
    - Collected data for 2018-2019
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

hospitals_number

- *hospitals_number* is a measure that captures the number of hospitals at the county level
- Data Source: Variety of national public data sources
    - Collected data for 2019
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

hospitals_cardiac_intensive_care

- *hospitals_cardiac_intensive_care* is a measure that captures the number of hospitals with cardiac intensive care at the county level
- Data Source: Variety of national public data sources
    - Collected data for 2019
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

hospitals_cardiac_rehab

- *hospitals_cardiac_rehab* is a measure that captures the number of hospitals with cardia rehabilitation at the county level
- Data Source: Variety of national public data sources
    - Collected data for 2019
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

hospitals_emergency_dept

- *hospitals_emergency_dept* is a measure that captures the number of hospitals with an emergency department at the county level
- Data Source: Variety of national public data sources

    - Collected data for 2019
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

hospital_neurolgical_services

- *hospitals_neurological_services* is a measure that captures the number of hospitals with neurological services at the county level
- Data Source: Variety of national public data sources
    - Collected data for 2019
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

pharmacy_drug_stores

- *pharmacy_drug_stores* is a measure that captures the number of pharmacies and drug stores per 100,000 population
- Data Source: Variety of national public data sources
    - Collected data for 2020
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

primary_care_physicians

- *primary_care_physicians* is a measure that captures the population per primary care physician (in thousands)
- Data Source: Variety of national public data sources
    - Collected data for 2019
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

cardio_disease_physcians

- *cardio_disease_physcians* is a measure that captures the population per cardiovascular disease physician (in thousands)
- Data Source: Variety of national public data sources
    - Collected data for 2019
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

neurologists_physicians

- *neurologists_physcians* is a measure that captures the population per neurologist (in thousands)
- Data Source: Variety of national public data sources
    - Collected data for 2019
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

Neurosurgeons_physcians

- *neurosurgeon_physcians* is a measure that captures the population per neurosurgeon (in thousands)
- Data Source: Variety of national public data sources
    - Collected data for 2019
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

health_insurance_status_percent

- *health_insurance_status_percent* is a measure that captures the percentage of individuals without health insurance, under age 65
- Data Source: Variety of national public data sources
    - Collected data for 2019
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

Medicare_beneficiaries_heart_disease_totalcostpercapita

- *Medicare_beneficiaries_heart_disease_totalcostpercapita* is a measure that captures the total cost of care per capita for medicare beneficiaries diagnosed with heart disease
- Data Source: Variety of national public data sources
    - Collected data for 2020
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

Medicare_beneficiaries_heart_disease_totalincrementalcosts

- *medicare_beneficiaries_heart_disease_totalincrementalcosts* is a measure that captures the total incremental cost of care for medicare beneficiaries diagnosed with heart disease
- Data Source: Variety of national public data sources

    - Collected data for 2020
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*

medicare_beneficiaries_heart_disease_prevalence_percent

- *medicare_beneficiaries_heart_disease_prevalence_percent* is a measure that captures the percentage of prevalence of diagnosed heart disease among medicare beneficiaries
- Data Source: Variety of national public data sources
    - Collected data for 2020
    - *Note: This is a population estimate from the census tract by county*
- Can be found on the CDC Interactive Atlas of Heart Disease and Stroke for *Map Area: US Map-County Level* under *Risk Factors (county, census tract)*
